

Common Caution Deposit of Rs.5,000 for all browsers

1. There will be common caution deposit and rules for all browsers. One point of shop store for all browsers. Microsoft. Profits from the participating Website Companies will be shared according to my rule. 80:20. 80% for myself. Remaining Majority for Microsoft and then to other Browsers.
2. Mostly DDoS attacks happen through Mobile phones. So, they have to buy a common caution deposit either through Microsoft or through other browsers like Chrome, Firefox and Safari.
3. Microsoft will administer that deposit amount and penalize the DDoS attackers.
4. Normally it is once in a while attack because no one wants to lose so much of their money for nothing.
5. If found to be DDoS attacker, all browsers will not allow them to use the attacked website who subscribed to the service with Microsoft, unless they pay the fine of Rs.5,000. Other websites will be available to view as usual.
6. All browsers means major websites may be apprehensive to show their websites in all browsers. So only Major browsers like Chrome, Firefox and Safari and others may participate.
7. How do you find an attacker? We don't care about the attacker. We only care about the browser. If the browser is compromised, he is an DDoS attacker. Organisations should be responsible for the use of their browsers.
